

Umsig walls

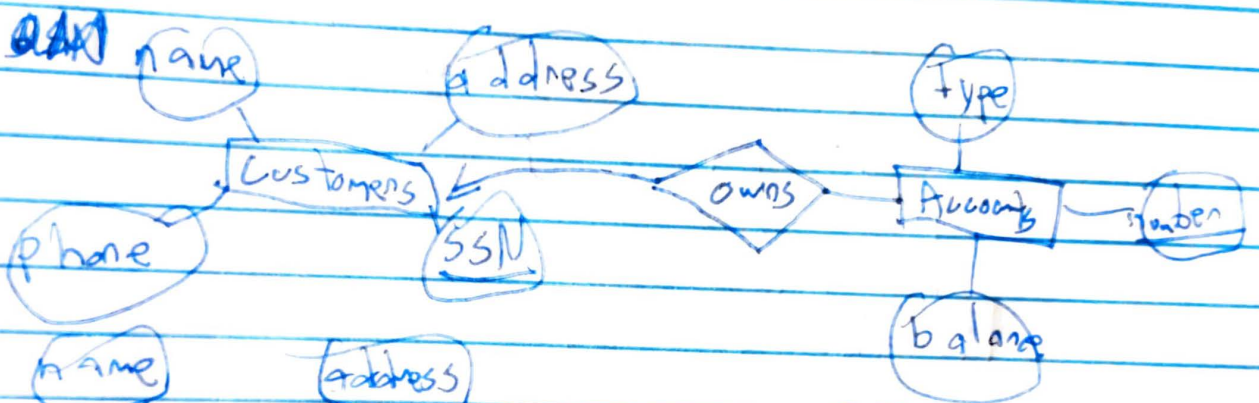

4.1.1

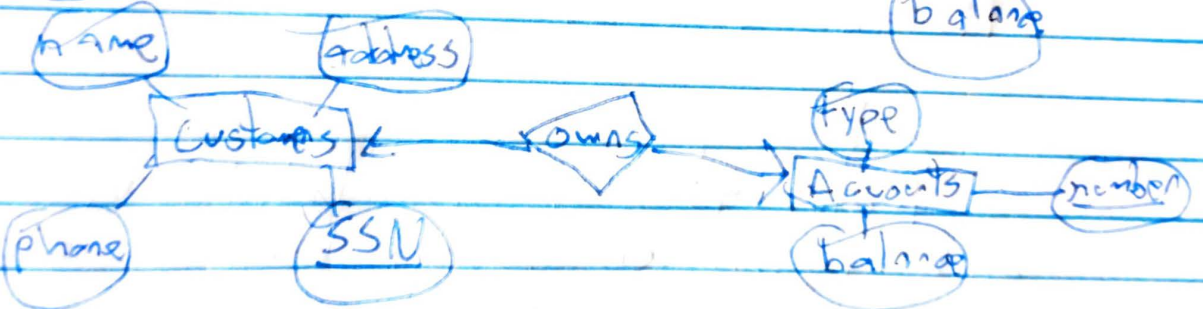

4.3.1 i) SSN and number are keys, ii)

4.1.2

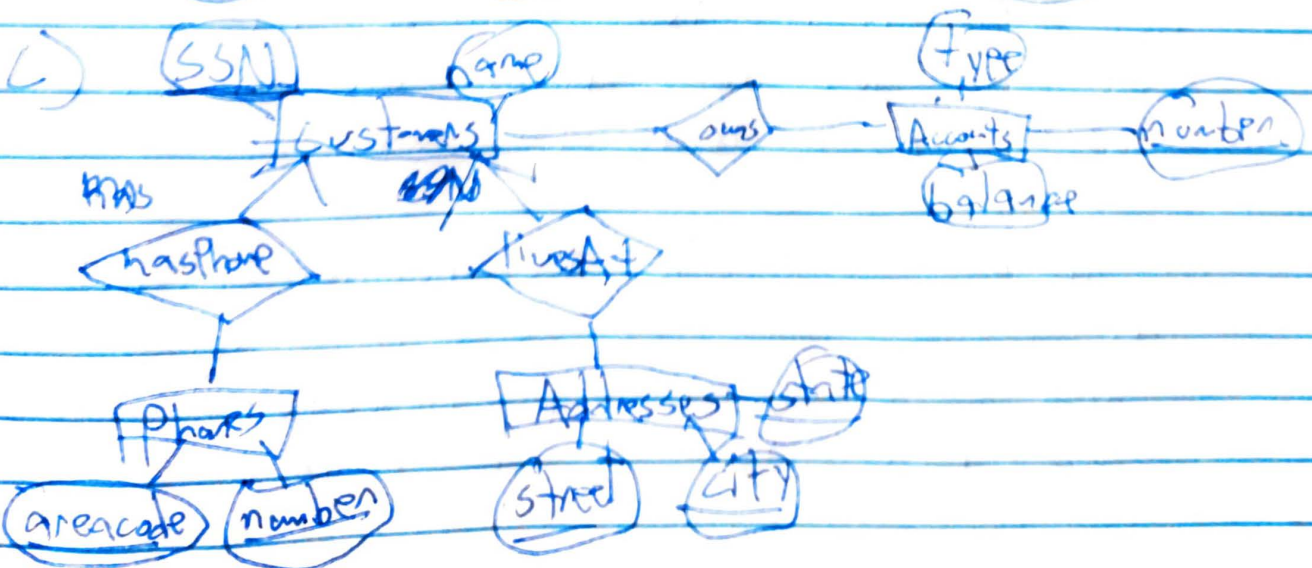

a)

b)

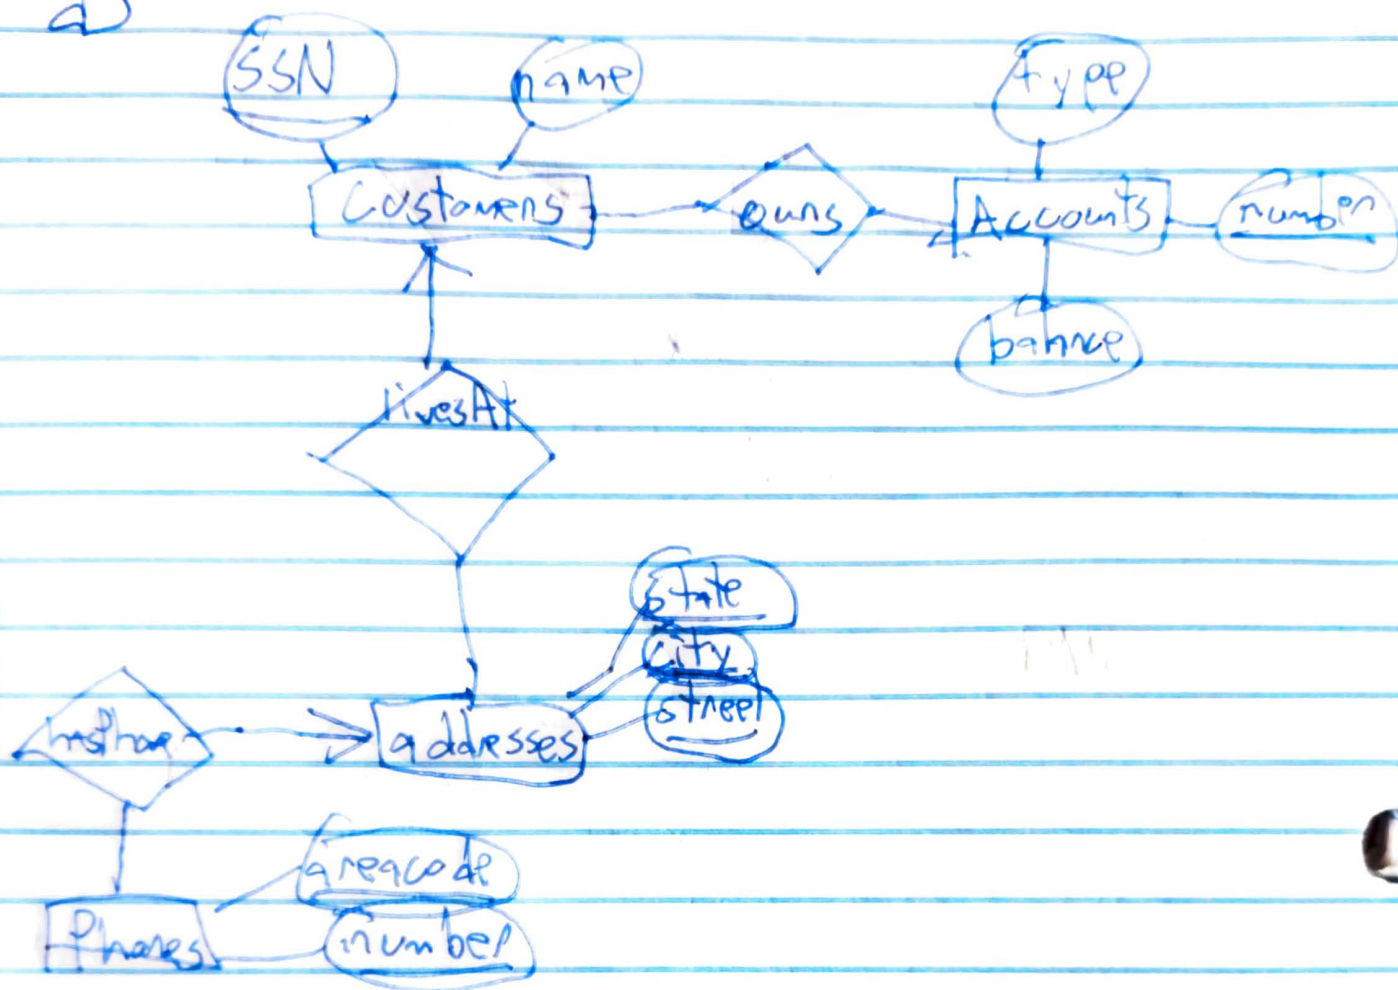

c)

4.1.2

d

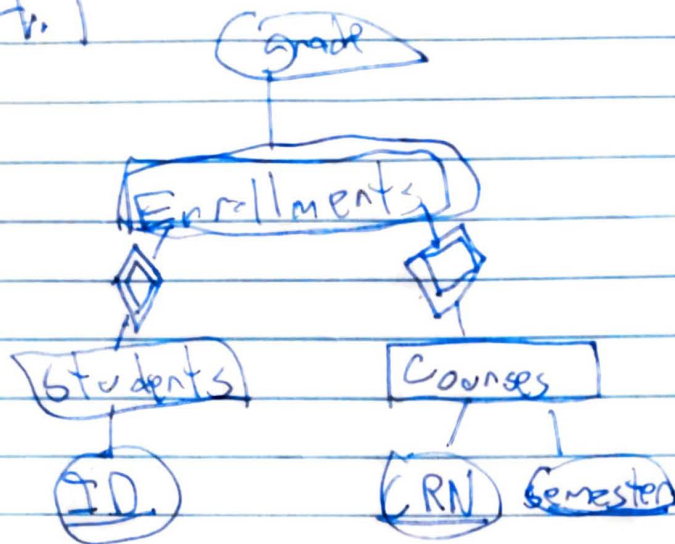

4.2.1

Rules that are violated are each customer should have an account set due to the has relation and the account set may have one or more accounts as members of account set.

I would make the relationship between Acctsets and customers many-to-one and the relationship between Acctsets and Accounts one-to-many.

4.4.1

Weak entity set is **Enrollments** as **grade** is not part of its key.

Double Diamond for many-to-one relationship provides key for weak entity set while
ID - **students** : **Courses** - **CRN**, **Semester**
 are foreign keys for their respective relations.

4.5.1

Customers (SSNo, phone, name, add)

Flights (number, day, aircraft)

Bookings (row, seat, ~~to~~ cust SSN, FlightNo, FlightDay)

4.2.3
